MANOR LORDS

Manor Lords 2

Greg Styczeń from Slavic Magic created the medieval city-builder and real-time tactics video game Manor Lords, which Hooded Horse published. With more than three million wishlists, it was the most anticipated game on Steam when it launched in early access on April 26, 2024.

Gameplay

Manor Lords is a city-building game with real-time tactical combat that takes place in late 14th-century France. Another way to think at the game is as a colony simulation. Manor Lords has three distinct modes: On the Edge, Restoring the Peace, and Rise to Prosperity.

The following characteristics set them apart: While Restoring the Peace offers a more balanced experience, Rise to Prosperity and On the Edge, respectively, place more emphasis on growth through city-building and conquest through violence. A certain amount of customization is available in the game; players can change in-game elements including starting position and off-map dangers.

By assembling resources, overseeing supply lines, and growing trade networks, the city-building components concentrate on growing a settlement that was initially small while also controlling risks to the settlement's internal unity.

Players must manage six different forms of taxes and strike a balance between rapid growth and environmental consequences like weather and the potential for environmental degradation like soil exhaustion and deforestation because the game places a strong emphasis on historical authenticity. Although Manor Lords is typically viewed from an isometric top-down viewpoint, it also has a third-person camera mode that lets players explore its streets.

The developer claims that the game's goal is to create an organic city construction experience; dwellings can be constructed without the intrusion of fixed or handcrafted zoning grids, which are included in SimCity and Skylines games, and the roadways are nearly always curved.

Development

Manor Lords was developed by Greg Styczeń alone, using his studio Slavic Magic. Early on, Patreon donations helped finance some of the work. Additionally, Styczeń was awarded a grant from Epic Games in 2021 as part of their Epic MegaGrants initiative. Unreal Engine 4 was used to create the game at first.

When Styczeń first released an announcement trailer in July 2020, they wanted the game to have 14,000 wishlists on Steam. But the excitement increased gradually, and by January 2024, Manor Lords had more than two million wishlists, surpassing Hades II just before its release to become the most-wishlisted game on Steam with over three million by its release.

Originally scheduled for release in late 2023, Styczeń decided it needed "more bugfix and polish" and postponed the game until the following year. On April 26, 2024, Manor Lords became available for early access. A week prior to the game's release, Styczeń issued a statement in an effort to lower expectations. He made clear that Manor Lords was the first game he had created, that the launch was early access, and that it was not meant to compete with Total War or role-playing games like Kingdom Come: Deliverance.

The announcement of Manor Lords' transition to Unreal Engine 5 was made in June 2024, and the version 0.7.987 was finished by August 22.

Crow Country

SFB Games created and released the 2024 survival horror game Crow Country for the PlayStation 5, Windows, Xbox Series X/S, PlayStation 4, and Nintendo Switch. The player is an investigator investigating an abandoned theme park in a setting that is visually similar to PlayStation 1 horror games like Resident Evil and Silent Hill.

Critics gave Crow Country mostly favorable reviews when it was first released, praising the game's design, which was reminiscent of previous horror games, its writing and story, and its use of puzzles and combat.

Gameplay

Like Resident Evil and Silent Hill, Crow Country is a survival horror game where players must explore the area to locate items, work out riddles, and slay enemies. 'Survival' has adversaries and conflict, but 'Exploration' does not. The player must use a variety of weapons, such as a handgun, shotgun, and flamethrower—some of which are unlocked by solving optional puzzles—to aim and shoot at enemies they come across in different places.

Players can either lock into place to focus their aim or run and shoot foes. Bandages, medkits, and antidotes can be used to restore the player's limited health, which is drained by enemy strikes and environmental dangers.

Players interact with vending machines and containers to gather items and ammunition. Players investigate the game's surroundings and progressively open up new regions by finding keys or resolving riddles, like assembling objects from various places.

Plot

When Mara Forest, a special agent, arrives at Crow Country, an abandoned rural amusement park close to Atlanta, Georgia, in 1990, she is looking for its founder, Edward Crow, who vanished inexplicably two years earlier. Arthur Mole, a paranormal photographer, is injured and alerts her to the presence of dangerous creatures.

After assisting him back to her vehicle, she carries on with her inquiry, meeting Edward's business partner Marvin Trumble, his foreman Tolman, his daughter Natalie Crow, a lawyer named Julie Baron, police officer Harrison James, and Edward's daughter Natalie Crow.

As she explores Crow Country, she finds that the park is filled by zombie-like monsters known as "Guests" and that it conceals a dig site that produced pure gold that appeared to have "grown" from root-like structures. In order to hide their traces, Marvin and Crow purchased a closed gold mine in Brazil after the government questioned where the gold was coming from.

However, it was forced to close after receiving negative press following the serious injuries sustained by 15-year-old Elaine Marshall in the park. The root-like things start sprouting from a pool deep beneath the park, and it is discovered that one of these guests, who seem to be carrying some sort of infectious disease, actually hurt Elaine Marshall.

Marvin finds Harrison shot dead as Mara continues into the park, and after a struggle, he is unintentionally knocked off a catwalk to his death. While she descends to the center of the dig site and finally encounters a now-deformed and sick Edward Crow, Mara instructs the other survivors to flee to her car.

Developer: SFB Games **Publisher:** SFB Games

Engine: Unity

Platforms: Nintendo Switch, PlayStation 4, PlayStation 5, Windows, Xbox Series X/S

PS4, Switch --16 October 2024

Genre: Survival horror
Mode: Single-player
TiTi Rating: 7/10

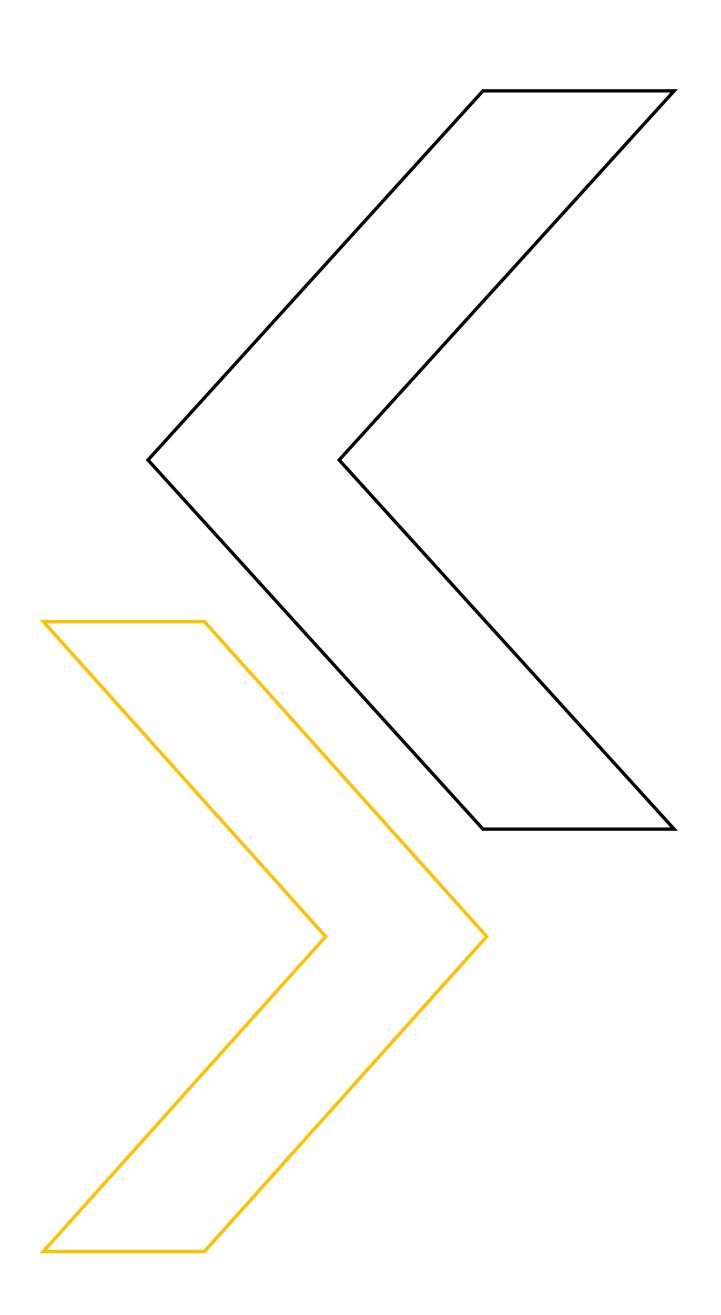

He discloses a number of important details, including the fact that all investigators become sick if they come into contact with a guest. The guests have been coming out of the excavation site and its pool, which is actually a gateway gadget. Since the "roots" are actually focusing antennae that allow the gateway to operate properly, the more the roots were mined for gold, the more deformed the arriving Guests got, making the initial Guest the only one with the ability to communicate.

In the course of the talk, it is discovered that Mara is not a special agent and that she is Elaine, infected via contact with a prisoner guest, and that she falsified her police documents, which she had stolen from Harrison. She ran away from the hospital where she had been staying to find Crow, but not to exact retribution as he had assumed, but to inform him that she was dying and that there was nothing the hospital personnel could do to save her.

Crow provides Mara with a remedy that he created after testing it on numerous critters, but he only has five vials. Since he intends to leap into the pool to see the other side, he instructs Mara to use them to save herself and the others. The Guests were once humans from a 22nd-century Earth who were trying to travel back in time since the world had become totally untenable, he also discloses to her in a note transcribed from the first Guest's comments.

After that, Crow plunges into the pool and emerges as a hideous, deranged creature, compelling Mara to murder him. Mara drives out with the rest of the survivors. They take the remedy and unwind by a fire four miles from Crow Country. In her monologue, Mara discusses both her anxieties about the future and her optimism for it.

Mouthwashing 2

The 2024 psychological horror adventure game Mouthwashing was created by Wrong Organ and released by Critical Reflex. The game, which is played in the first person, centers on the five crew members of the freighter starship Tulpar after they are left stranded in space due to an unexplained disaster, with limited supplies.

The remaining crew members accuse the captain, who is still alive but gravely disabled and unable to talk or move, of purposefully crashing the ship for an undisclosed cause. The story of the game is segmented and nonlinear. Video game critics gave the game favorable reviews because of its story and aesthetic.

Gameplay

Mouthwashing is an adventure game that is played in the first person and has little fighting and survival features. Another way to explain it is as a walking simulator. Exploring the Tulpar, conversing with the crew, and manipulating objects to solve puzzles are the main gameplay elements. The game is presented as a nonlinear story that spans several scenes set in the weeks and months leading up to and following the catastrophe. Timeline jumps are occasionally indicated by non-diegetic transitions that resemble crashes or glitches. The episodes that take place after the crash are told from the viewpoint of Jimmy, a former co-pilot who assumes the job of captain in the aftermath of the catastrophe, while the scenes that take place before the tragedy are told from the perspective of Captain Curly.

Plot

The freighter spaceship Tulpar is sabotaged to collide with an asteroid during a normal shipment. Captain Curly, co-pilot Jimmy, healer Anya, me-chanic Swansea, and last-minute intern Daisuke make up the crew that makes it out alive. Airbag-like foam, however, blocks off the majority of the ship's resources; damage to this may potentially breach the ship's hull and cause deadly decompression.

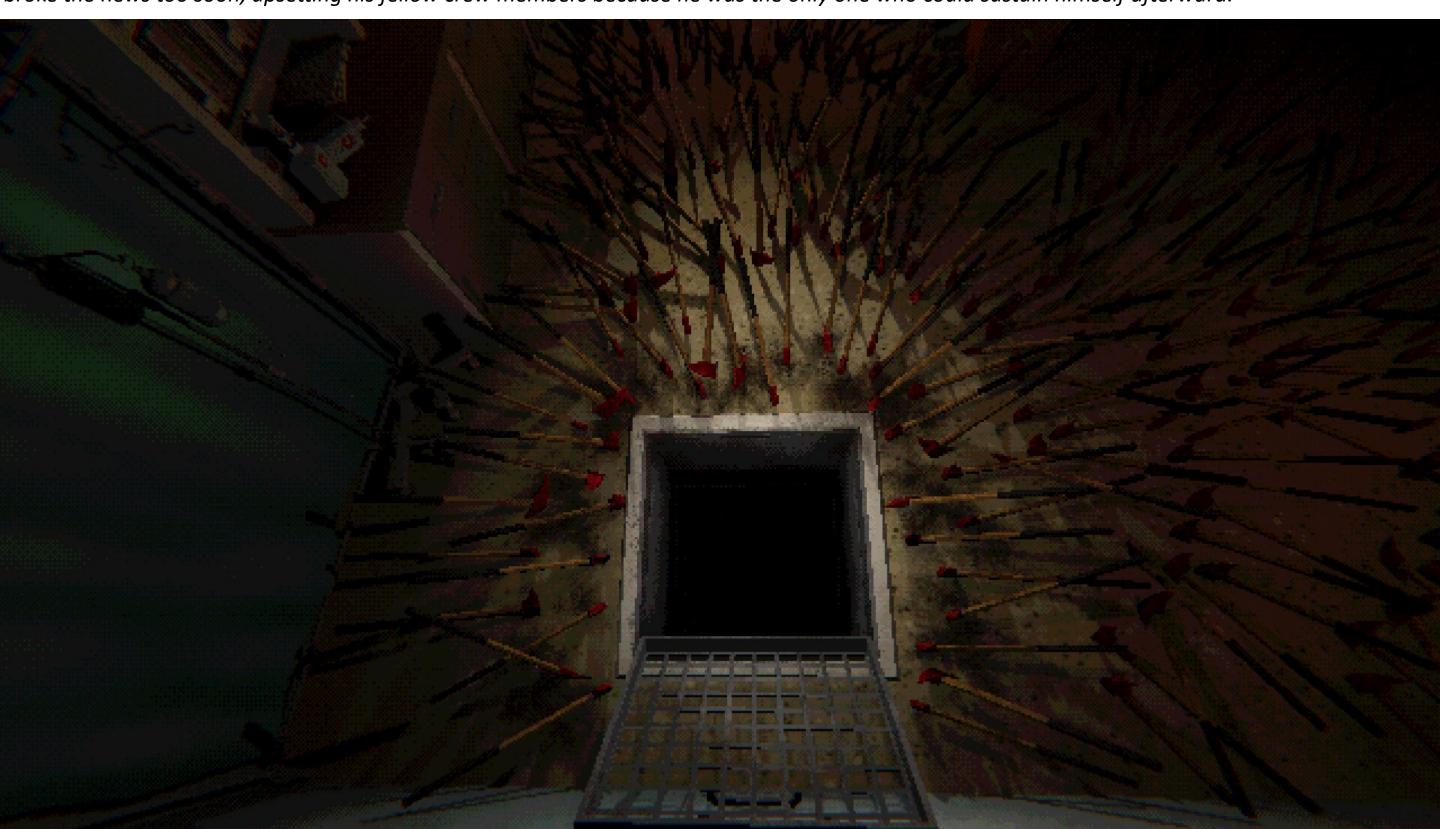

A decreasing supply of medications keeps Curly alive after the crash mutilates him and renders him speechless and immobile. As a result, Jimmy names himself acting captain and accuses Curly of causing the catastrophe after going postal. After two months, when food and medical supplies are starting to run low, the crew opens their secret shipment to find it contains only mouthwash.

They consume it for the ethanol and sugar, and the resulting drunkenness exacerbates already existing conflicts. Anya and Curly eventually lock themselves in the hospital bay. Jimmy uses the ship's only bottle of rubbing alcohol to knock Swansea unconscious when he is unable to persuade her to assist him in breaking in, then slips into the utility bay to retrieve tools. When Jimmy learns that Swansea is protecting the ship's only functional cryopod, he forces Daisuke to crawl through a broken vent in order to get to Anya and Curly.

Daisuke is severely injured in the process, and his wounds become infected when Jimmy uses the mouthwash as an impromptu antiseptic. Swansea, who had grown affection for Daisuke, reluctantly and crudely euthanizes him with a fire axe before violently turning on Jimmy.

Later, in a private conversation with Curly, Anya disclosed that she is pregnant with Jimmy's child; other interactions between Curly and Anya sug-

gest that Jimmy raped her; flashbacks to the days before the crash show that the Tulpar crew was scheduled to be laid off after their delivery; Curly broke the news too soon, upsetting his fellow crew members because he was the only one who could sustain himself afterward.

Developer: Wrong Organ **Publisher:** Critical Reflex **Producer:** Kai Moore

Engine: Unity **Platform:** Windows

Release: 26 September 2024
Genre: Adventure, Horror
Mode: Single-player
TiTi Rating: 7/10

After Curly made an effort to defuse the situation with Jimmy, Anya secretly told Jimmy she was pregnant. In the end, Jimmy crashed the Tulpar in a failed murder-suicide attempt due to stress from his upcoming layoff, jealousy of Curly, and the fear of being blamed for Anya's pregnancy. Jimmy enters the medical bay in the present, when it is discovered that Anya overdosed and killed herself. In his final moments, Swansea denounces Jimmy's cowardice and selfishness before he kills him with the ship's emergency revolver. Jimmy throws a fictitious birthday celebration for the crew's corpses as his sanity rapidly deteriorates. In a bizarre vision, he force-feeds the captain his own flesh after chopping off and eating a portion of Curly's leg.

Following a string of more visions in which he is chastised for his acts during the game and his failure to accept responsibility for them, Jimmy decides that he can atone for his transgressions by ensuring Curly's survival and puts him in the cryopod. Then, thinking he has effectively resolved their issue, he kills himself with the gun after apologizing to Curly for hurting him. Curly is put into a 20-year cryosleep as the game's credits roll, leaving his future up in the air.

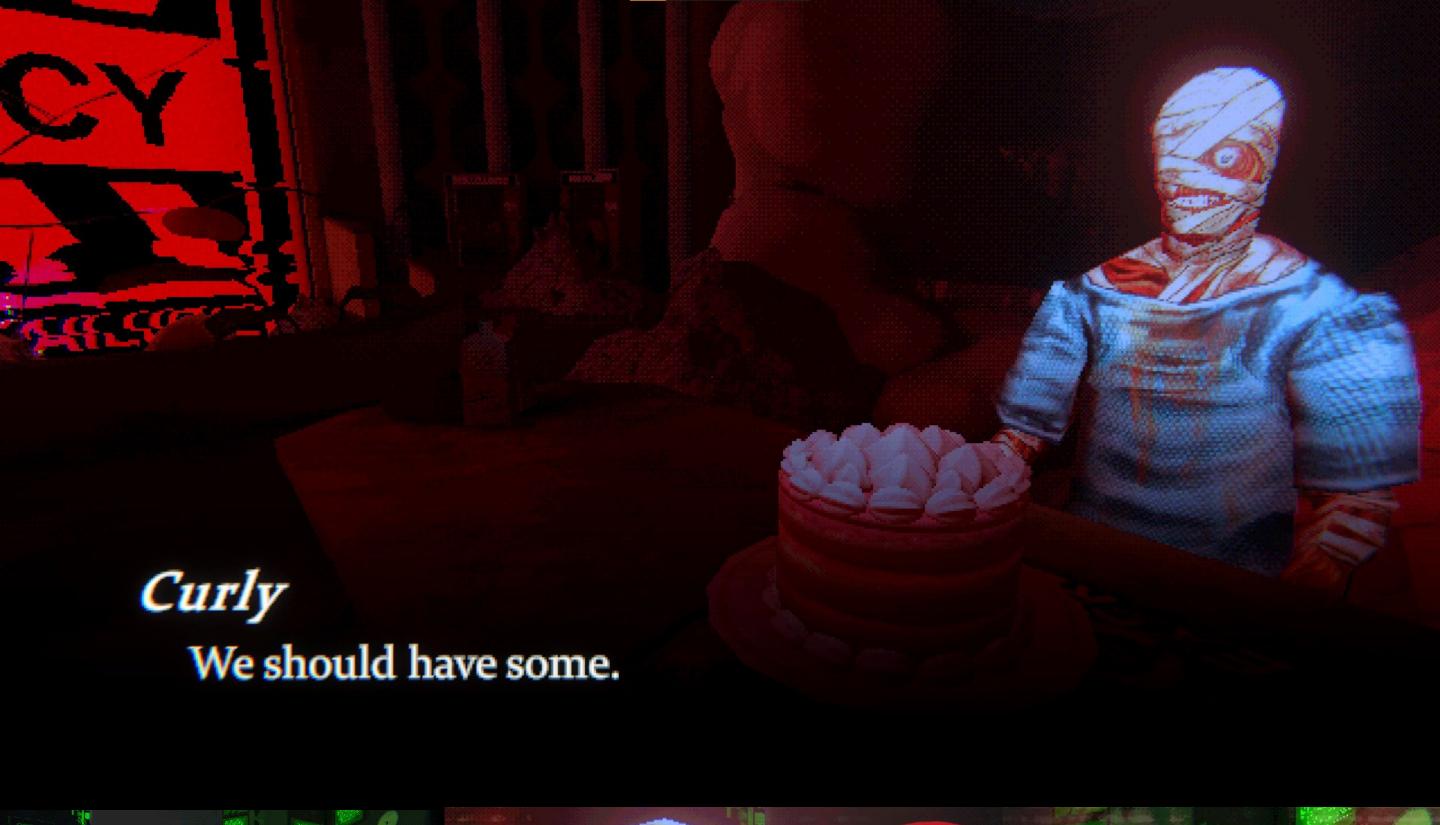

Development and release

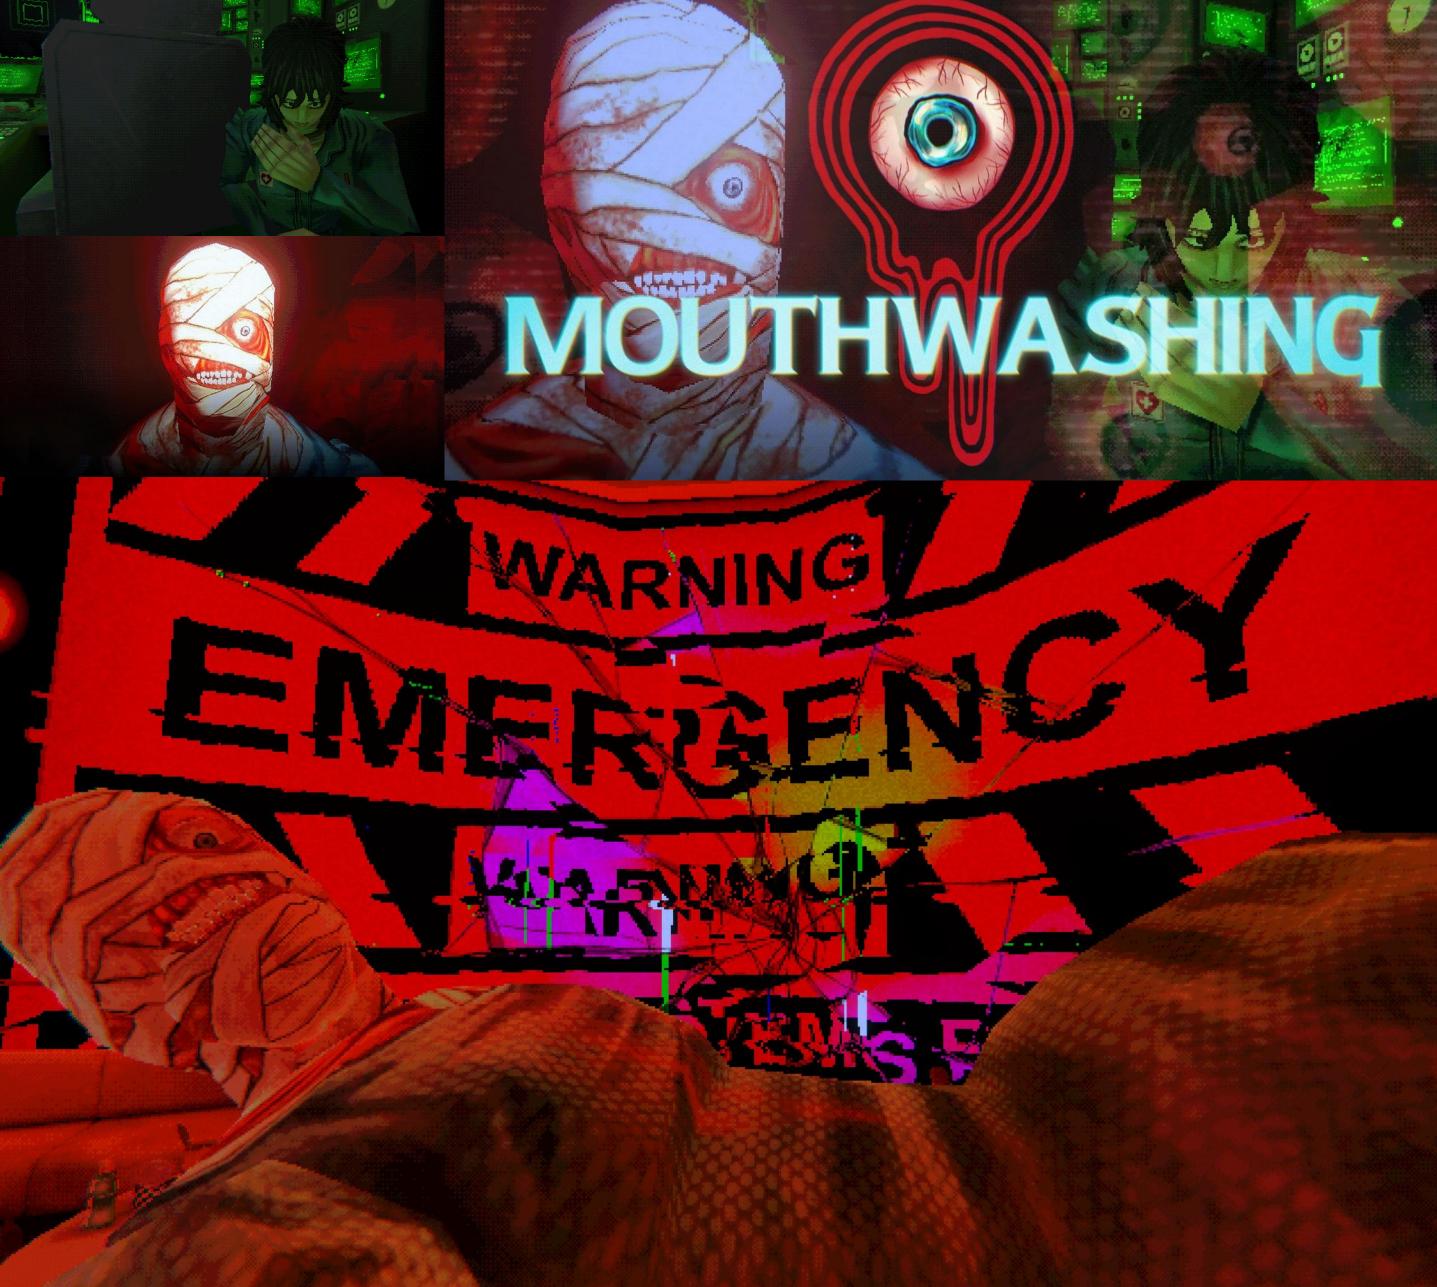

Producer Kai Moore, audio designer Martin Halldin, story and art designer Johanna Kasurinen, designer and programmer Jeffrey Tomec, and technical designer Dave van Egdom are all part of the Mouthwashing team. Movies like Alien, Event Horizon, Sunshine, The Thing, and Pandorum served as inspiration for the developers. The game's low poly, vintage visual aesthetic was influenced by games made for the first PlayStation.

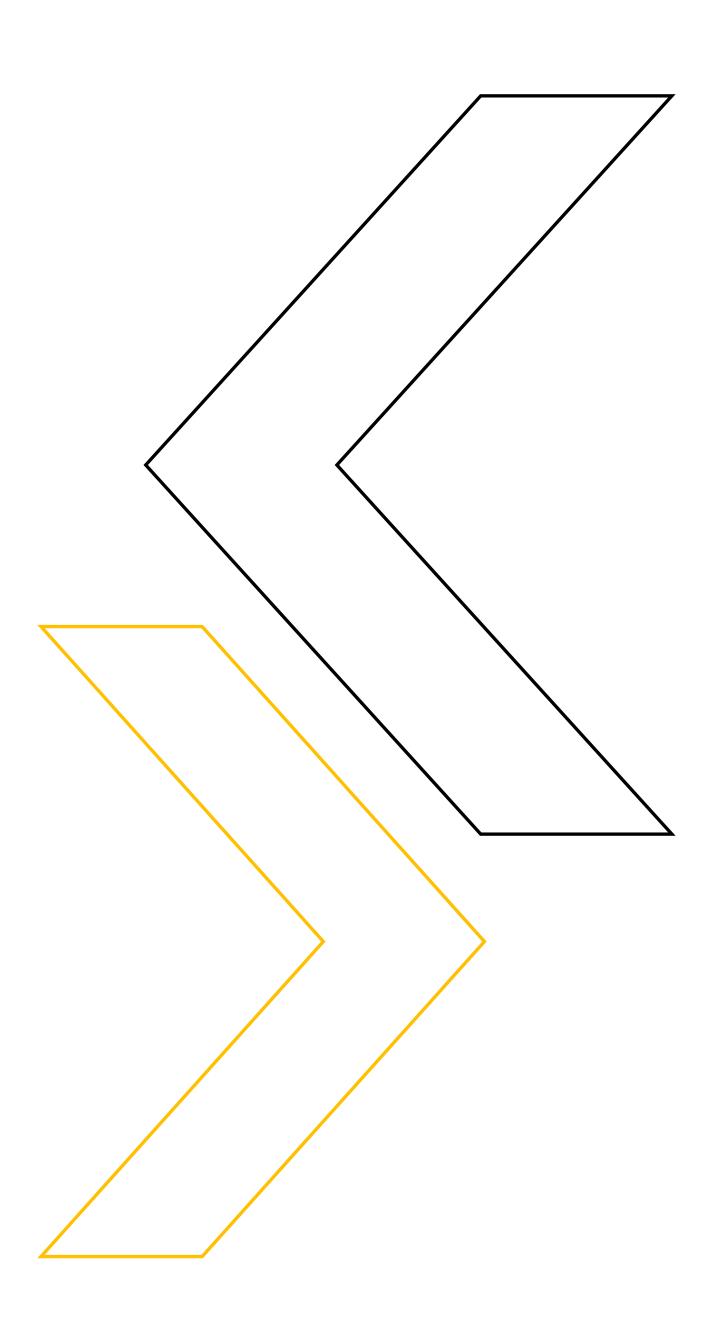

It was that state of a team of people trying to convince ourselves, 'We can still fix this if we just try harder,' when everything was already limping and on fire, that eventually planted the seed, according to art designer Johanna Kasurinen, who credits independent developer Puppet Combo with introducing her to the style, saying in an interview with Rolling Stone that "we don't need state-of-the-art graphics to make something impactful." In a subsequent interview with The Washington Post, Kasurinen clarified that the original idea for the game was inspired by a prior project.

Mouthwashing was initially revealed as a free upgrade to developer Wrong Organ's debut game, How Fish Is Made, which was influenced by Katamari Damacy. After a well-received demo at Steam Next Fest in February 2024, the full game was made available on Steam for Windows on September 26, 2024. Mouthwashing garnered positive reviews from users when it was initially released. It received the highest possible rating of "Overwhelmingly Positive" on Steam in the first two weeks of its release and was nominated for Game of the Year at the 2024 Indie Game Awards.

Obsidian Entertainment and Xbox Game Studios are the developers and publishers of the upcoming action role-playing game Avowed. Avowed is set in the world of Eora, which is the same universe as Pillars of Eternity. The game will be available for Windows and Xbox Series X/S on February 18, 2025.

Gameplay

First-person and third-person viewpoints are both available in the action role-playing game Avowed. To overcome adversaries, players can employ firearms, melee weapons, and magic. Players can accomplish feats like freezing adversaries in ice or entangling them in an Entangle spell by using the game's assortment of spells. Spells can be combined with other weapons to form combinations, like smashing through a frozen adversary with a sword.

Dual pistols, dual wands, a two-handed axe, or a sword (or wand, gun, or shield) and shield combination are just a few of the quick-change setups that players can choose from. As players advance in the game, they can acquire increasingly potent abilities thanks to the game's multiple skill trees. Additionally, weapons can be upgraded separately. Avowed has a number of sizable open areas for players to explore, despite not being a fully open world game.

Other non-playable characters (NPCs) will be encountered by the player as they explore the game's universe. Like Obsidian's last game, The Outer Worlds, the game has conversation options that change depending on the player's preferred tone.

A few NPCs, each with their unique personality and fighting abilities, will join the player's party and become friends. Avowed does not allow for romantic partners. With two companions at a time, players can explore the game's universe and finish objectives.

Plot

The setting of Avowed is the Living Lands, a region of the Eora universe. Large caverns and valleys, dry stony deserts, and verdant forests are just a few of the diverse settings that make up the game's Living Lands. The "Dream Scourge" is a mystery plague that players take control of as an Aedyr Empire ambassador sent to the Living Lands.

Development

Obsidian's first first-party AAA project after Microsoft acquired the studio in 2018 is Avowed. At first, the game was marketed as Obsidian's version of the expansive open world of The Elder Scrolls V: Skyrim.

As production went on, though, the company decided against copying Skyrim's gameplay and instead to create a game more like Obsidian's earlier role-playing games, which have a more constrained scope but place more of an emphasis on story and people. The story's companions are "integral" to the game's plot, according to director Carrie Patel.

Avowed was revealed by Obsidian Entertainment and Xbox Game Studios at the July 2020 Xbox Games presentation. The game will be accessible to Xbox Game Pass subscribers at launch and is scheduled for release on February 18, 2025, for Windows and Xbox Series X/S.

2024 Lotus Emeya

Starts at \$92,778.00

Active aerodynamics

Spread your wing:

The active, motorsport-inspired, grille, dam, diffuser, and rear wing work in harmony to maximise control and extend driving range.

Driver focussed cockpit

Access instant information from zero-lag interfaces.

Instant connectivity

Stream, navigate, and update with 5G data transfer.

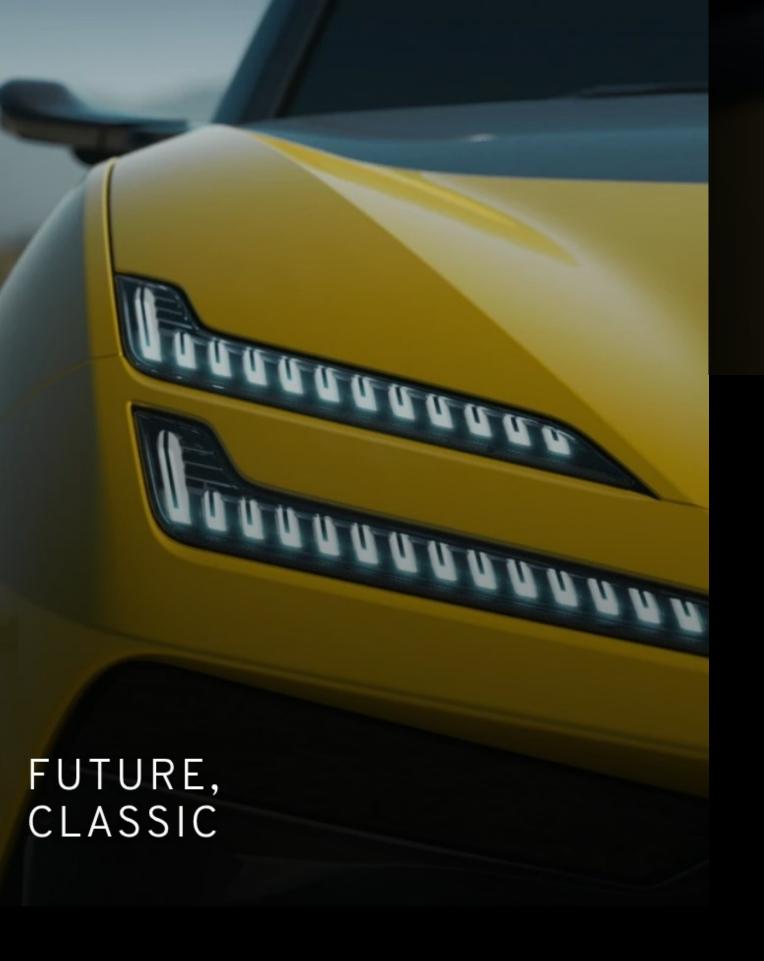

Hyper-real KEF audio

Critically acclaimed sound system, developed in partnership with KEF.

Spread your wings

Led by light

Adaptive Driving Beam technology maximises lowlight vision while shielding oncoming drivers from glare.

LOTUS EMEYA

The fully electric Hyper-GT. Everyone drives, not everyone is a driver.

EMEYA

A meeting of worlds.

Powerful and precise.

Daring and delicate.

Ambitious and understated.

Bridging past and future; Performance and design; Luxury and efficiency; Emotion and logic.

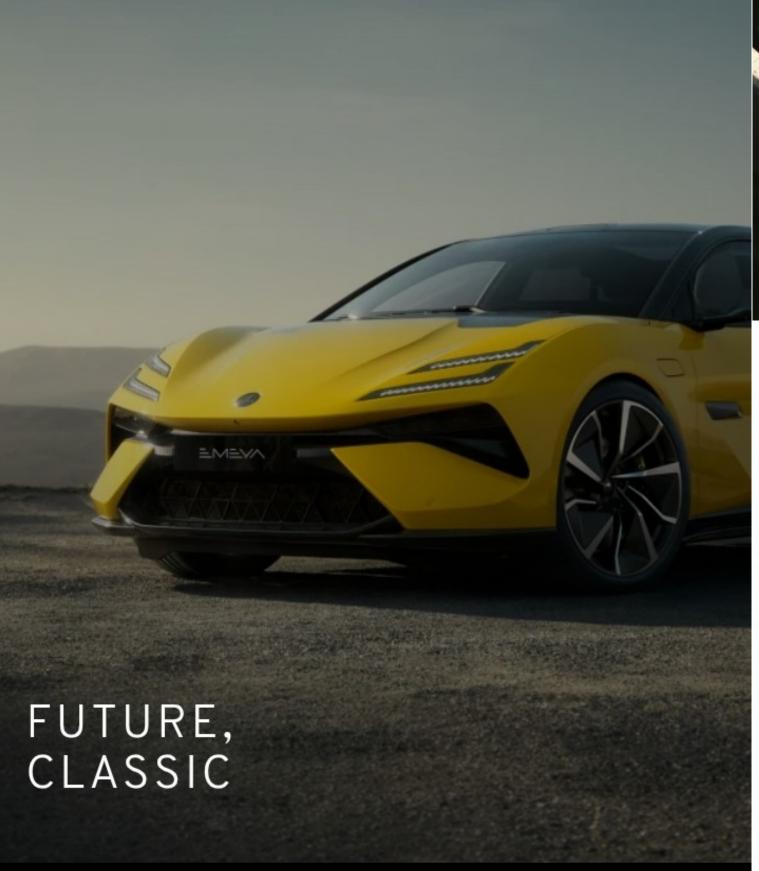

Born on the track, at home on the road.

Carbon fibre couture

Extensive use of carbon fibre across the Emeya interior and exterior reduces weight while enhancing the performance-driven atmosphere.

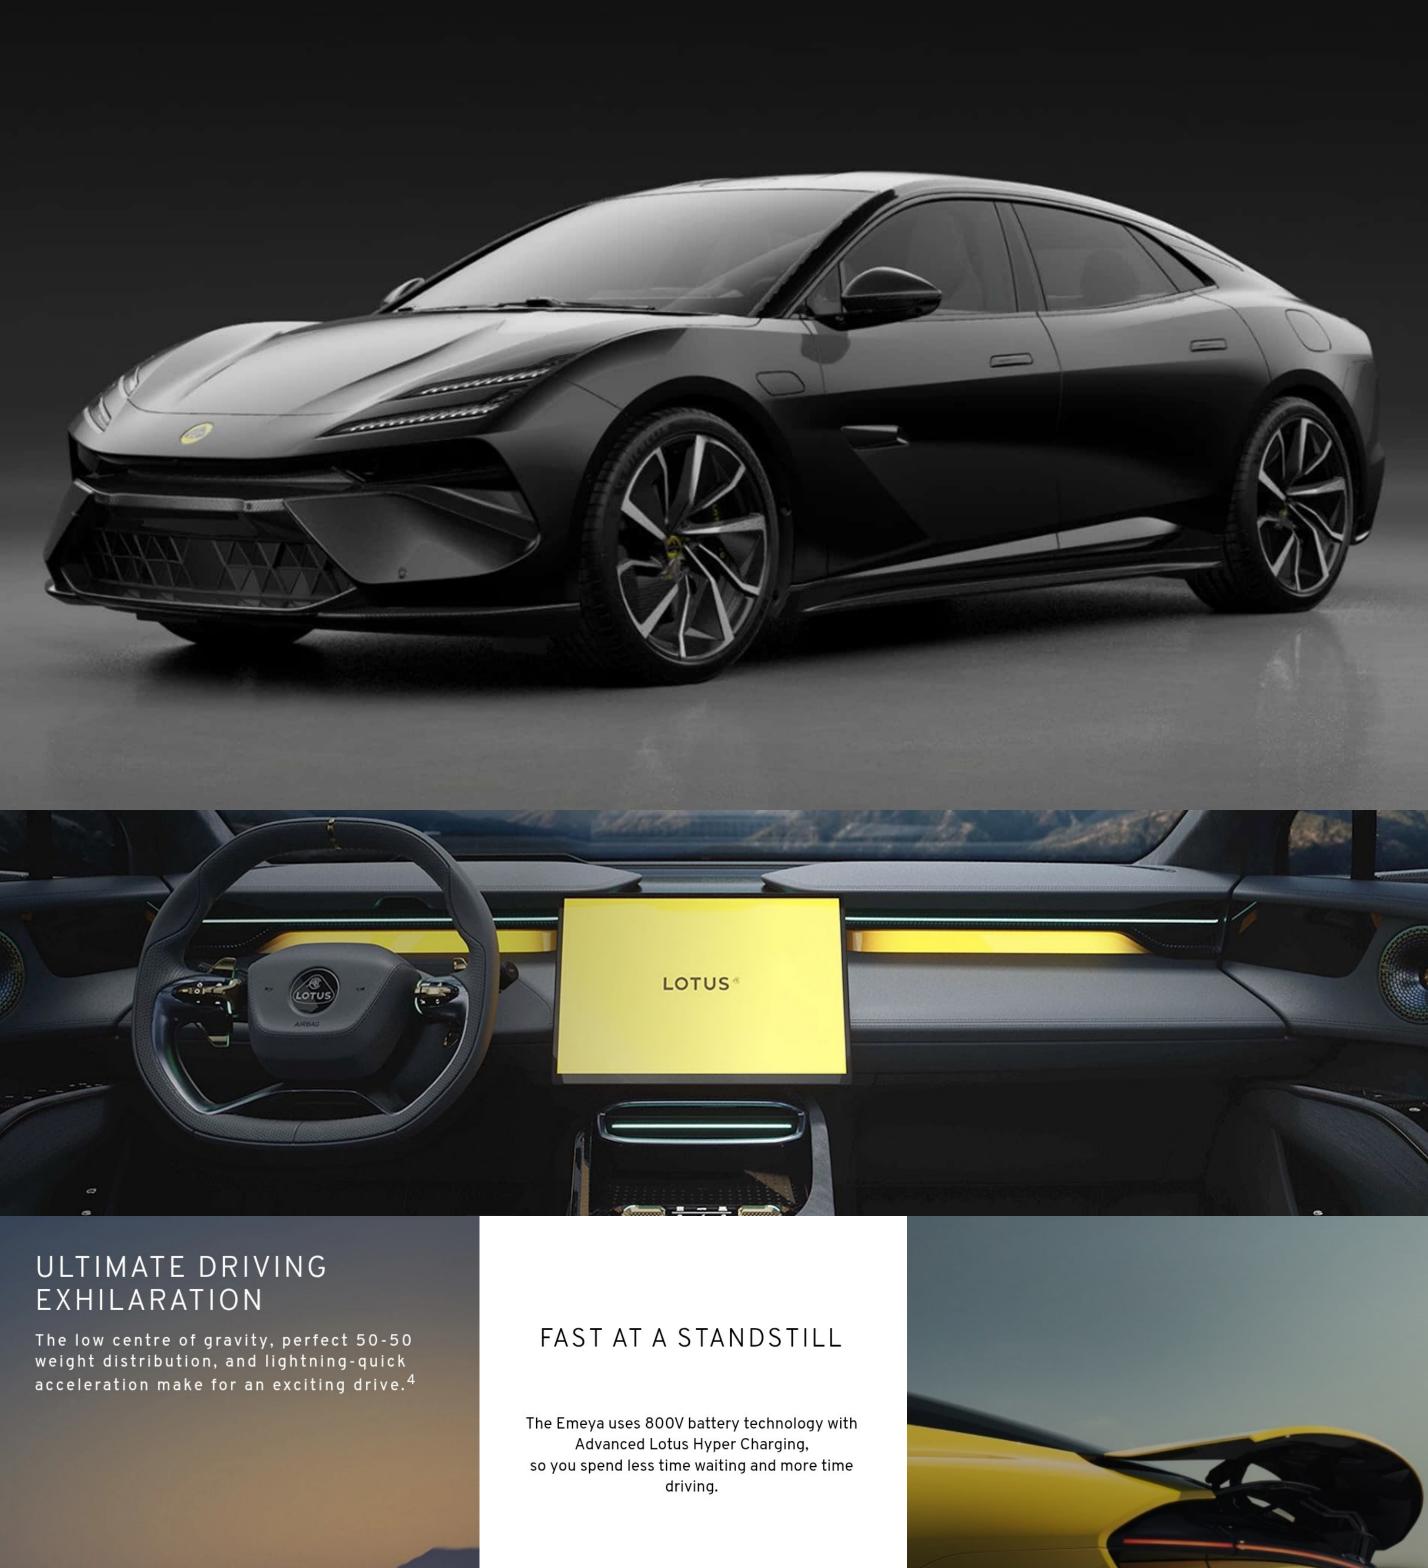

A masterpiece in motion

Active aerodyr

Powerful and progressive lines emphasise movement and agility, with dramatic musculature and an effortlessly sleek silhouette. From the runway to the highway

Luxuriously sustainable upcycled fabrics are crafted from fashion industry off-cuts for a premium finish.

\ctive aerodynamics

Spread your wings

The class-leading active rear wing deploys at high speed to increase downforce and improve handling.⁴

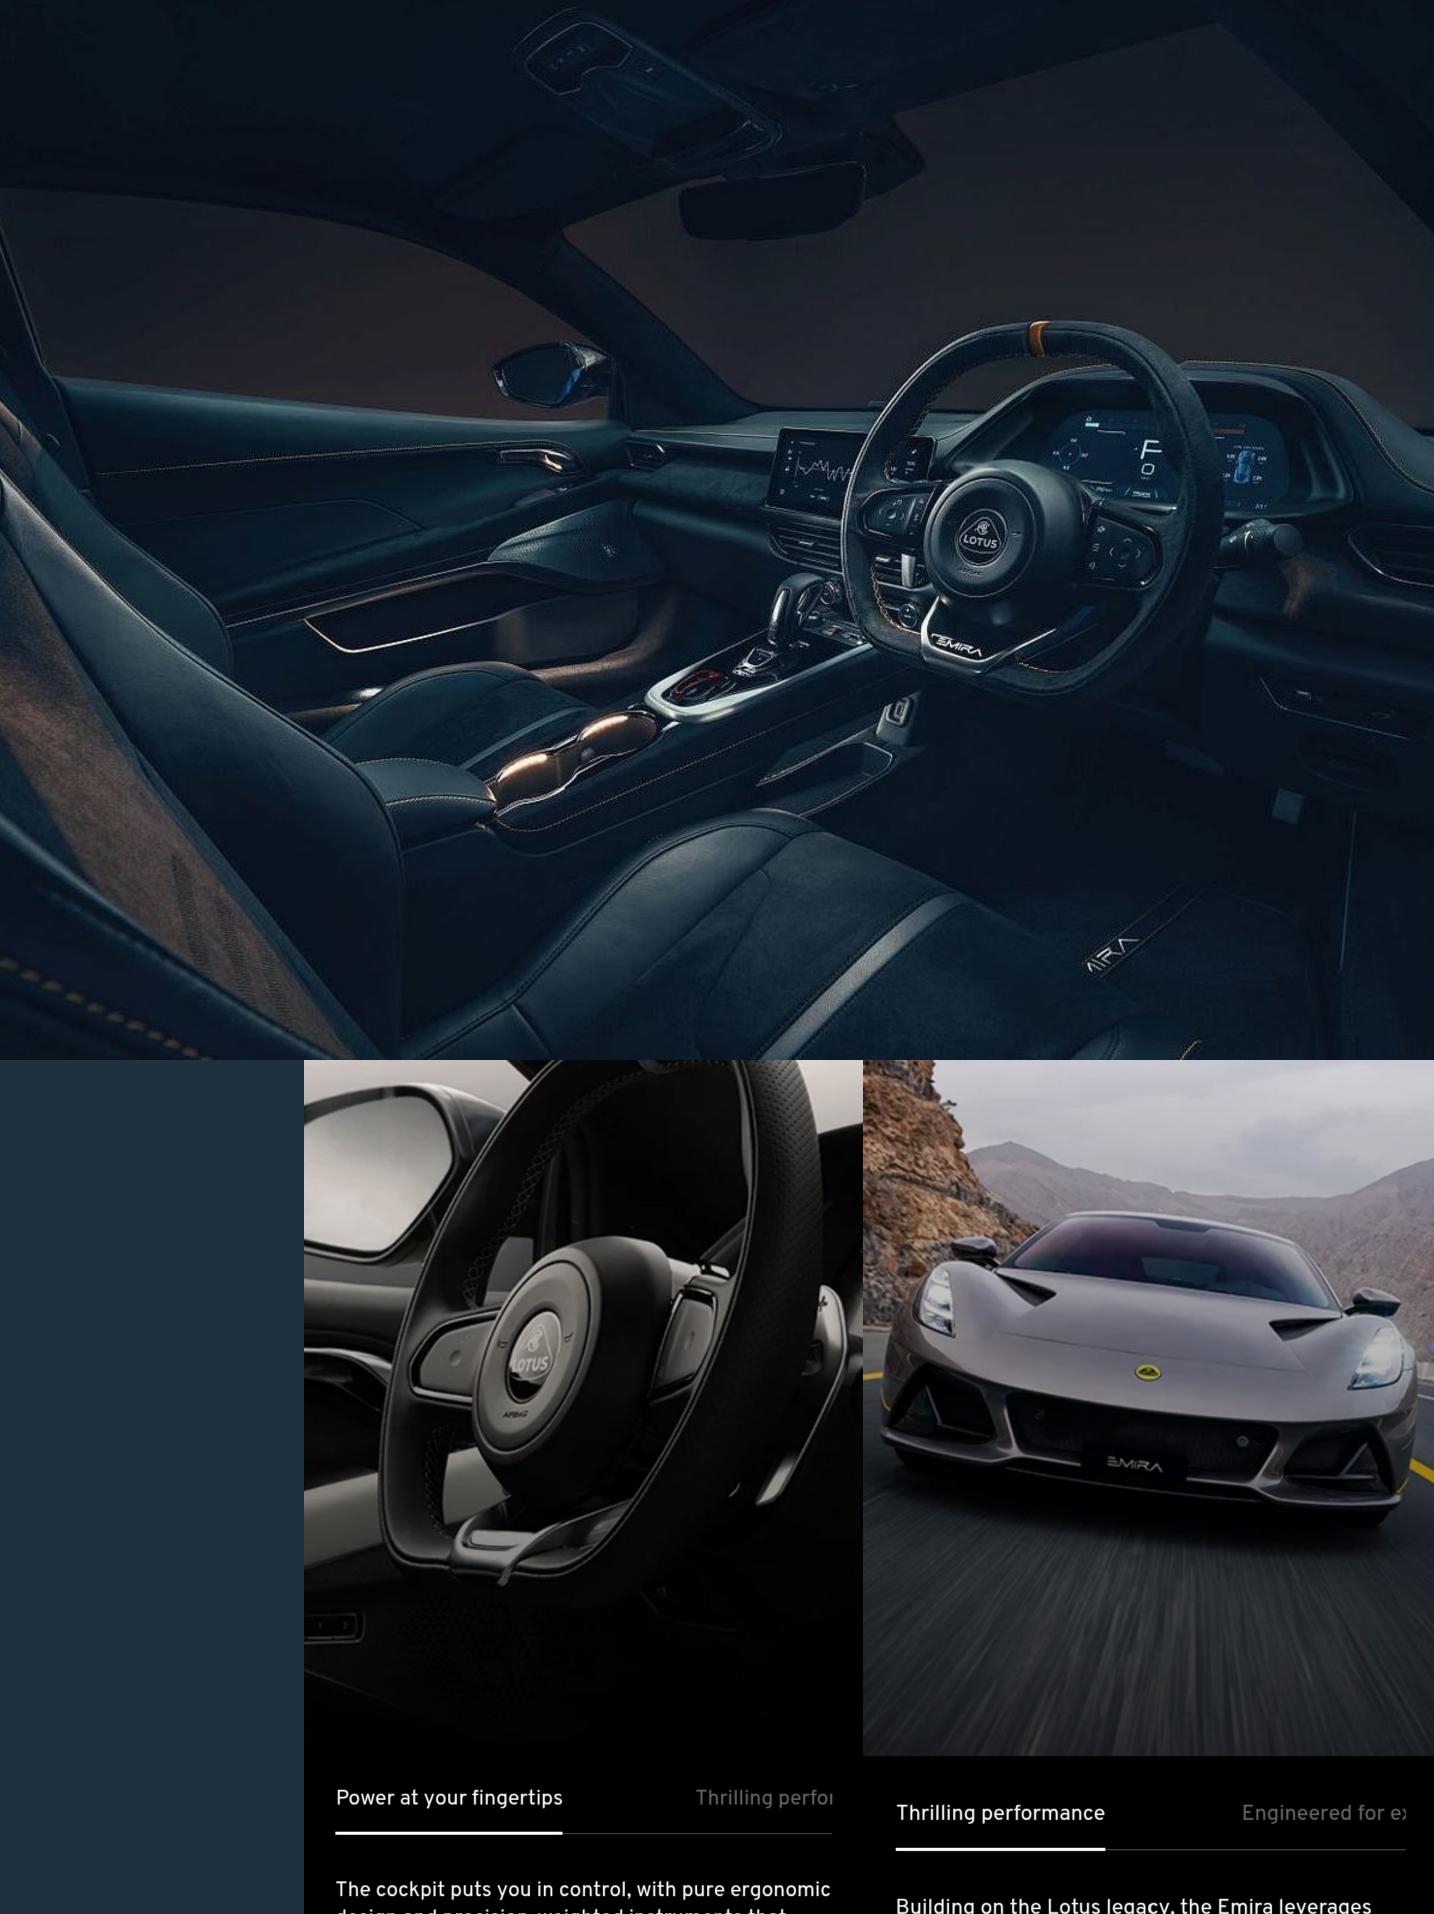

2024 Lotus Emira

Starts at \$99,900.00

design and precision-weighted instruments that make every action perfectly intuitive. Trust your instincts and focus on the road ahead – the Emira keeps everything you need for the ultimate driving experience close at hand.

Building on the Lotus legacy, the Emira leverages smart design, materials and cutting-edge technology to deliver enhanced stability, exceptional handling, and a characteristically low centre of gravity. This car demands to be driven.

performance

Engineered for excitement

As your speed climbs higher, downforce increases to match. Expert engineering choices mean the Emira maintains agility and grip on even the most challenging roads. Every Emira is tuned to perfection by the technicians at Hethel, adding that inimitable Lotus spirit you can feel in every drive.

OPTIMISED AERODYNAMICS

Inheriting the 'Carved by Air' philosophy of the
Evija hypercar, the Emira's bodywork
generates substantial downforce when in motion.
This intelligent design ensures
outstanding grip and control in all conditions.

The driving experience

Emira was truly designed for the drivers. Find out why its performance, handling, and responsiveness put it in a league of its own.

DEMANDS TO BE DRIVEN

1/2

The sleek cab-forward stance makes daily journeys thrillingly engaging, enhanced with premium comfort features to complement your lifestyle.

REAL RACING HERITAGE

2/2

Inspired by the race-ready Emira GT4, switch to track mode to maximise engine output, disable driver assistance, and unleash an adrenaline-charged drive.

BUILT FOR THE TRACK. ENGINEERED FOR EVERYDAY.

ENTER A NEW ICON

The Lotus Emira reinvents the sportscar, with class-leading driving dynamics, exotic looks, and enhanced comfort for everyday usability.

It is everything you would expect from a Lotus, but like nothing you have seen before.
